EDUCATION

M.S. Computer Science | **Northeastern University, Boston** | Massachusetts Sep 2025 – Dec 2027

Courses: Programming Design Paradigm, Database Management Systems, Algorithms, Essentials of Data Science

B.Tech, Information Technology | **Vellore Institute of Technology (VIT)** | India Jul 2021 – May 2025

Courses: Data Structures and Algorithms, Operating Systems, Software Engineering, AI, Probability and Statistics

EXPERIENCE

Software Engineering Intern (Remote) | **Infyz Solutions Pvt Ltd** | Internship Aug 2023 - Jan 2024

- Developed **Java-based ERP modules** and integrations, automating reports and syncing data across systems, which cut manual hand-offs by about **30%**.
- Improved legacy tools into modular code with object-oriented design and patterns, and built **Python, SQL** and **shell** monitoring dashboards that resolved nearly **25%** of performance issues before production.
- Collaborated with QA, product and development teams to gather requirements, write technical design documents and lead code reviews; used **Git, CI/CD pipelines** and **Docker** during Agile sprints to deliver reliable, production-ready software.

IT Intern (Onsite) | **NBTC Company** | Internship Oct 2023 - Dec 2023

- Customized SAP ERP modules using **ABAP** and built automation that integrated data sources and boosted system stability while reducing manual tasks by approximately **25–35%**.
 - Refined legacy utilities into reusable services; created performance-monitoring tools and dashboards with **JavaScript** and **Bash**, and collaborated with QA, product, and development teams to deliver via containerization and deployment automation.
-

PROJECTS

Order Management System with Fraud Detection and Forecasting Dec 2024 – Apr 2025

- Developed a **full-stack order management system** using **Python** and **SQL**; implemented user authentication, real-time inventory tracking and automated email notifications; containerized with **Docker** and integrated forecasting models (**LSTM, ARIMA, Prophet**).

Hybrid Deep Learning for Breast Lesion Segmentation and Classification Sep 2024 – Oct 2025

- Applied CNN and Transformer-based architectures on ultrasound images for lesion segmentation and classification; achieved **82.9%** accuracy and **87.7%** AUC, comparing models and documenting trade-offs for clinical application.

ML and DL Models for Predicting Mental Health Risks Jan 2024 – Aug 2024

- Trained **logistic regression, random forest, CNN** and **LSTM** models on multi-source datasets to predict Internet Gaming Disorder and cyber-bullying risk; best LSTM reached **91.6%** accuracy (**F1-score = 0.94**).

Additional Projects: Caterpillar Hackathon - Python-based voice inspection pipeline (speech-to-text, anomaly detection, EDA); **Vehicle Rental Management System** - Python and MySQL with normalized schema, CRUD APIs, and reporting dashboards; **Student Expense Tracker** - Java desktop app with persistent storage, validation, and CSV/Excel export.

PUBLICATIONS

Hybrid Deep Learning for Breast Lesion Segmentation and Classification (under review, 2024 - Present).

Thyroid Disease Prediction Using ML Models (Book Chapter, Jan 2025).

SKILLS

Languages: Python, C, C++, R, HTML5, CSS3, Java, JavaScript, TypeScript, Bash, Go, Shell, SQL (MySQL, PostgreSQL, SQLite), NoSQL (MongoDB). **Tools and Platforms:** Git, GitLab, JIRA, Docker, Linux, VS Code, REST APIs, OpenAPI, Postman, Tableau, Power BI, Neo4j, GCP, AWS (S3, EC2, SageMaker), Azure, Streamlit, Apache Airflow, CI/CD (GitHub Actions), unit testing (JUnit, pytest). **Libraries and Frameworks:** React, Node.js, PyTorch, TensorFlow, Scikit-Learn, Transformers, Pandas, NumPy, Apache Spark, Keras, OpenCV, Gensim, spaCy, Matplotlib, NLTK, XGBoost, Dialogflow, ggplot2, Hugging Face. **Competencies:** Natural Language Processing, Computer Vision, Reinforcement Learning, Data Engineering, Generative AI, MLOps, DevOps, Text Summarization, Transfer Learning, Machine Learning, Data Analysis, Neural Networks (CNN, RNN, LSTM), time series.
